Electrical Fatal Incident Data

Australia & New Zealand 2022 - 2023

This Report covers:

- Definitions
- Summary of 2022-2023 year
- Trend Analysis
- Series of graphs & tables for data supplied covering the period 1 July 2000 to 30 June 2023
 1. Regional fatalities & victims' demographics
 2. Fatalities involving network assets
 3. Fatalities involving consumer installations and equipment
 4. Tables - fatal electrical accidents since July 2000
 5. Tables - summary of electrical fatality reports 2022-23

Definitions

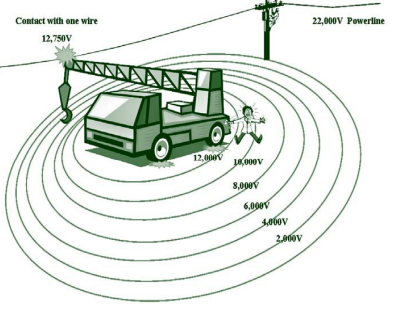

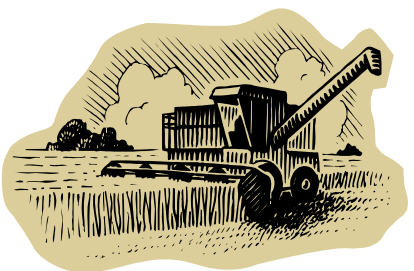

"Consumer installation"	All parts of an electrical installation past the point of supply on the consumer side.
"Distribution or supply equipment"	Equipment used in the generation, transmission, supply or distribution of electricity.
"Electrical fatal incident"	Any fatal event that results from an electrical shock, electrical burn or electrical arc burn except if linked to the initial event of a natural disaster, criminal activity or suicide.
"Electrical worker"	A person who carries out electrical work and is licensed or authorised to do so.
"General public"	A person who is not doing any work as part of his or her employment or under a contract of work, or training at the time the incident occurs
"Misuse/Interference"	To damage, mishandle or use equipment in a way that it is not intended, or for what it is designed.
"Non-electrical Worker"	A person who is in the process of carrying out their occupation and is not an electrical worker.
"Supply worker"	A person who is employed by a network operator.
"Work practice"	The process or method by which work is carried out.

Summary of 2022-2023 year

This report covers the 12-month period from 1 July 2022 to 30 June 2023. It is based on details of incidents reported to electrical safety regulators in Australia and New Zealand.

Eight electrical deaths from eight incidents were recorded in Australia and New Zealand in 2022-23. This is equivalent to 0.25 deaths per million people (dmp) which is 0.07 dmp lower than the last year. There were 10 deaths occurred during last year (2021-22).

Seven of eight deaths occurred in Australia.

 <p>Contact with one wire 12,750V 22,000V Powerline 12,000V 10,000V 8,000V 6,000V 4,000V 2,000V</p>	<p>There were five distribution network related death caused by five electrical incidents.</p> <p>All five deaths were associated with overhead conductor incidents.</p>
	<p>Three deaths were caused by four incidents involving customers' installations or appliances or equipment.</p>
	<p>Of the total eight people who were electrocuted, 12% (1 of 8) were electrical workers, 60% (5) non-electrical workers and 38% (3) were the general public.</p>

Trend Analysis

Electrical fatality information from the past 23 years (2000-01 to 2022-23) has been analysed for trends and frequency.

The electrical deaths over 23 years continue to show a decrease from an average (three years) of 1.79 deaths per million people (dmp) in 2000-01 to 0.39 dmp in 2022-23. An average rate of reduction is 0.06 dmp per year.

In Australia, the reduction is from 1.87 to 0.40 (0.06 per year) dmp, while for New Zealand the reduction is from 1.39 to 0.33 (0.05 per year).

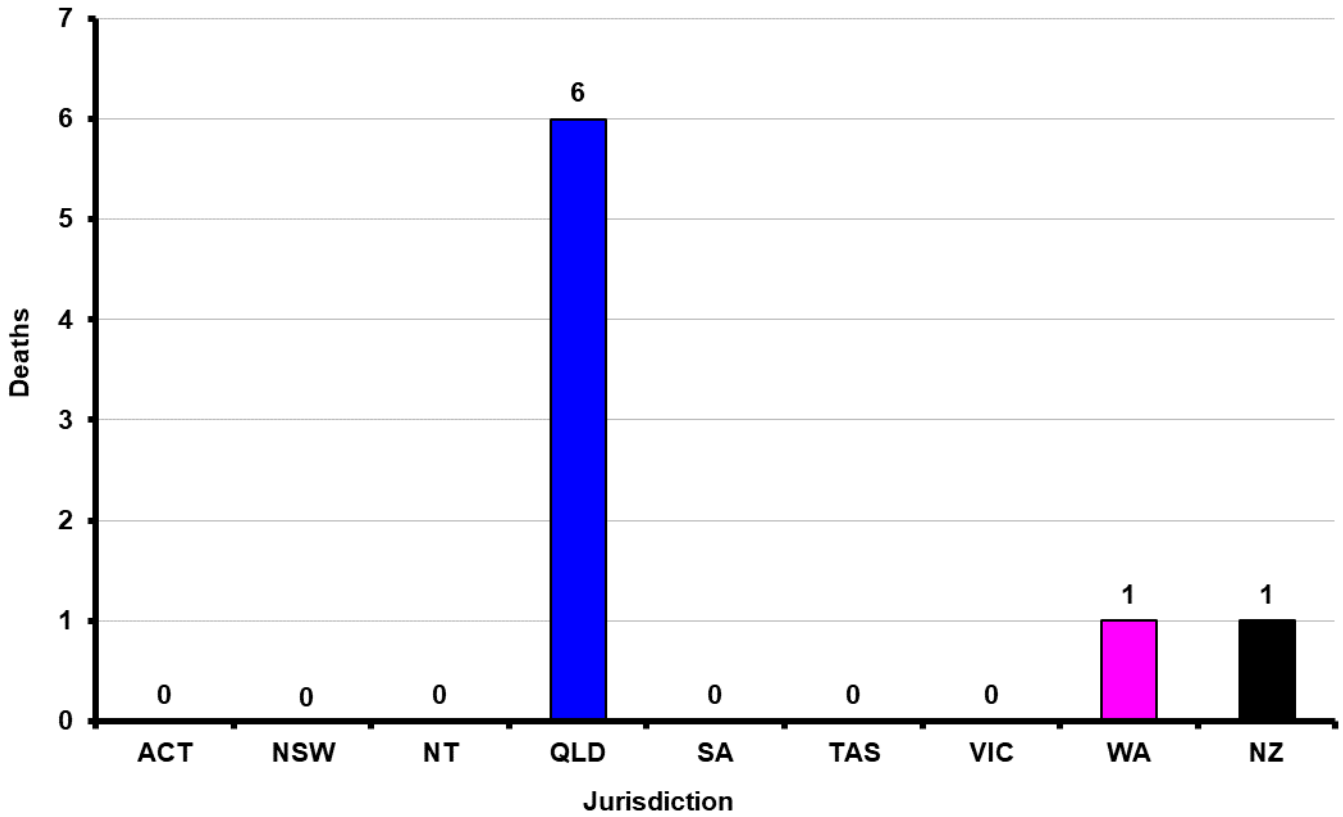

Most electrical deaths associated with electricity networks were as a result of working on or near energised overhead conductors. 90% (135 of 150) of electrical deaths associated with electricity supply networks involved overhead conductors.

Consumer appliances/equipment were involved in about twice (289) the number of deaths than the electricity supplier assets (150). Also, there was a large variation in the number of deaths involving consumer equipment from one year to the next than in deaths involving electrical supplier assets. The dmp continued to decline over the last 23 years for both consumer and supplier assets.

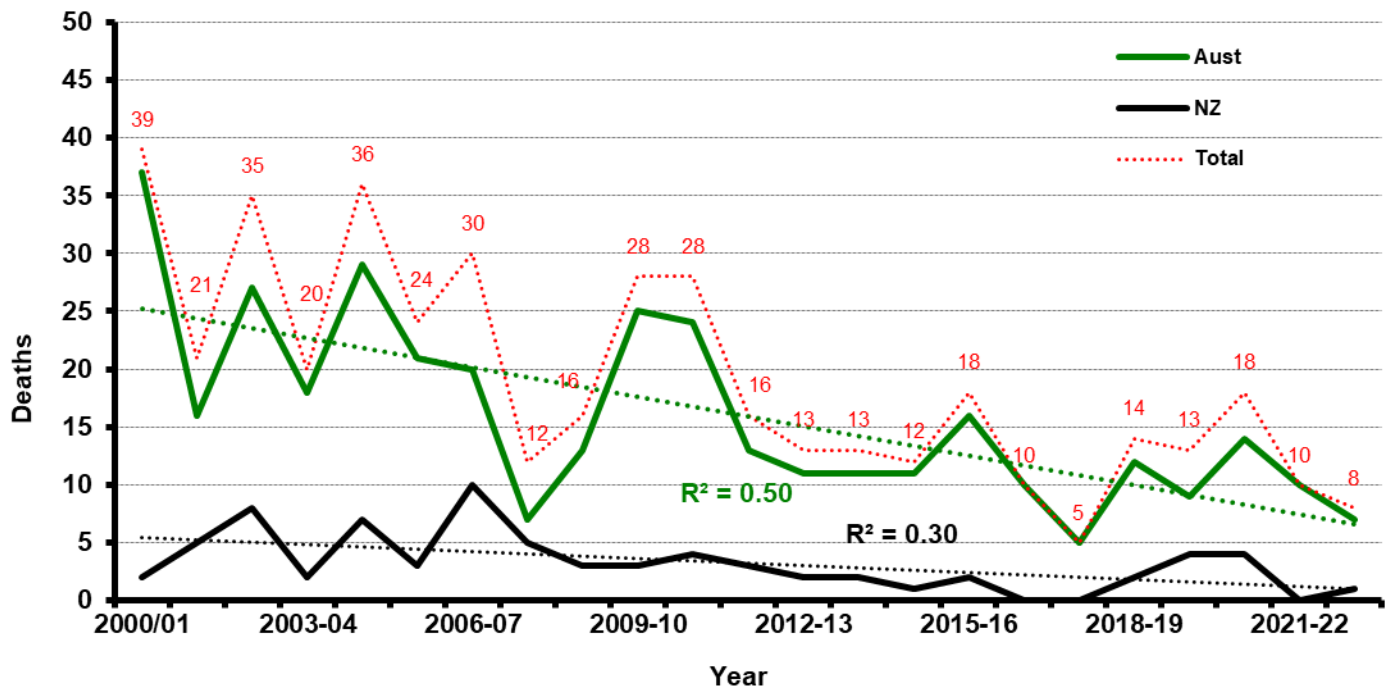

This report presents the information in a series of charts and tables.
